

Comparative Effectiveness of Lipid-Modifying Agents: Comparative Effectiveness Review Number 16 (Paperback)

Filesize: 2.89 MB

Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It's been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.

(Prof. Loyce Runolfsson Jr.)

COMPARATIVE EFFECTIVENESS OF LIPID-MODIFYING AGENTS: COMPARATIVE EFFECTIVENESS REVIEW NUMBER 16 (PAPERBACK)

To save **Comparative Effectiveness of Lipid-Modifying Agents: Comparative Effectiveness Review Number 16 (Paperback)** eBook, remember to refer to the button under and download the file or get access to other information which are in conjunction with **COMPARATIVE EFFECTIVENESS OF LIPID-MODIFYING AGENTS: COMPARATIVE EFFECTIVENESS REVIEW NUMBER 16 (PAPERBACK)** book.

Createspace, United States, 2013. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Over 28 million Americans have some form of cardiovascular disease (CVD), which causes more deaths than cancer, diabetes, accidents, and chronic lung diseases combined. A large amount of observational data, as well as clinical trials, support a significant, modifiable role of blood lipids in the production of disease. Cholesterol is transported in the blood in the form of particles containing lipids and proteins, called lipoproteins. Levels of low density lipoprotein cholesterol (LDL-c) correlate with the development of CVD, while levels of high-density lipoprotein cholesterol (HDL-c) are associated with a lower risk of disease. Cholesterol is a normal part of cell membranes, hormones, and bile acids that are involved in the absorption of some vitamins. Levels of cholesterol are influenced by its production in the liver and the ingestion of dietary fats. Bile acids are released into the intestine, aid in digestion, and then are mostly reabsorbed. Evidence suggests that lowering LDL-c reduces coronary heart disease (CHD) and ischemic stroke, making LDL-c a primary target of therapy. The National Cholesterol Education Program Adult Treatment Panel III (NCEP ATP III) recommendations provide guidance on the initiation of treatment aimed at lowering lipid levels based on individual patient characteristics. Medications available for lipid-lowering therapy have various mechanisms of action and pharmacokinetic properties. The most widely prescribed are the 3-hydroxy-3-methylglutaryl coenzyme A (HMG-CoA) reductase inhibitors. Known as statins, these agents reduce the production of cholesterol in the liver by binding with the enzyme responsible for its production. In contrast, fibrates do not influence lipid synthesis but rather reduce the levels of fatty acids in the blood. Ezetimibe is an agent that inhibits intestinal absorption by acting on the sterol transporter NPC1L1. Niacin...
